MIC7001 升级和修改后台文件步骤

一、准备软件

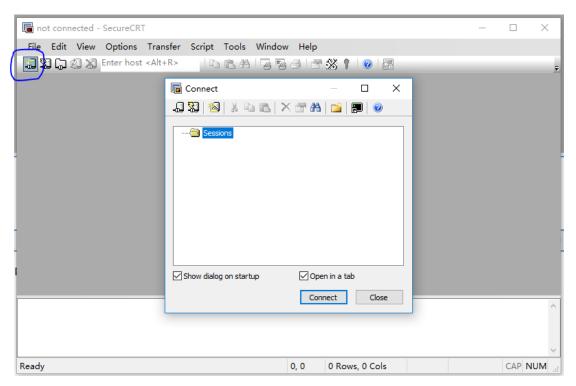

SecureCRT 绿 色 版 、 TFTP 服 务 器 , 可 以 到 https://github.com/pengriguang/mid/tree/master/tools/update 下载

二、登录后台

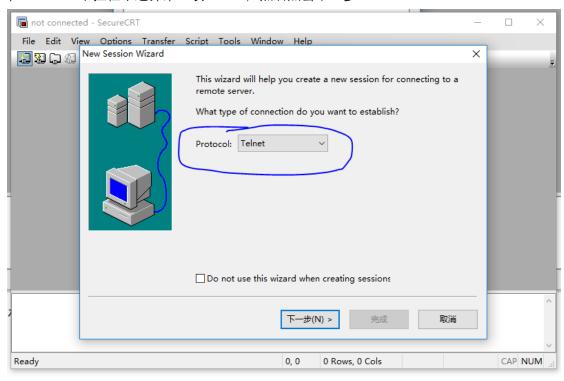

1. 双击 SecureCRTPortable.exe 打开绿色版的 SecureCRT 软件,如下图所示

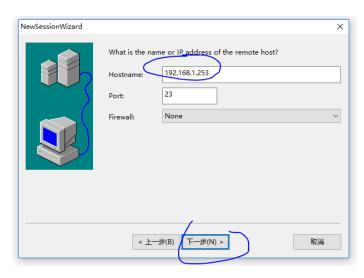

2. 点击工具栏中的第一个按钮

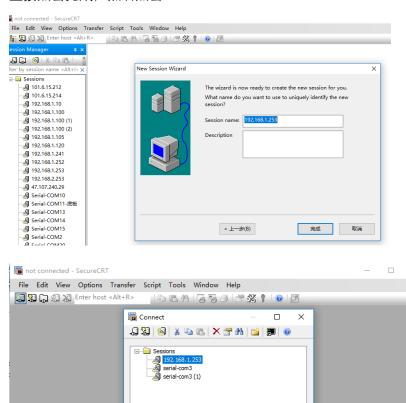

- 3. 在弹出对话框的 Session 文件夹下面,右击鼠标,选择 New Session
- 4. 在 Protocol 下拉框中选择第三项 Telnet, 然后点击下一步

5. 在 Hostname 中输入需要连接设备的 IP 地址,例如: 192.168.1.253,然后点击下一步

6. 直接点击完成, 然后点击 connect

☑ Show dialog on startup

Ready

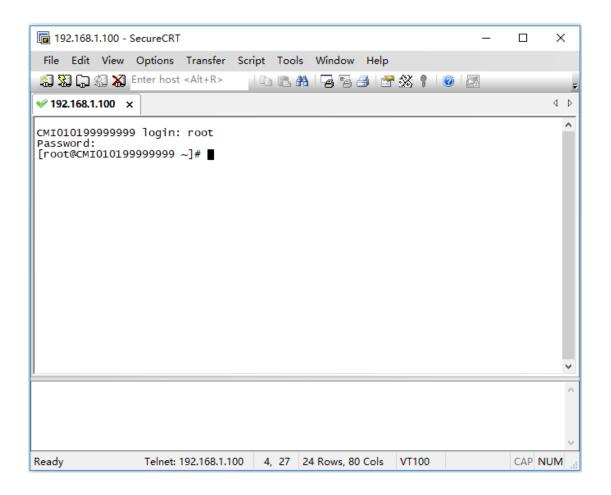

7. 在登录后台的界面中输入用户名为 root, 然后回车, 再输入密码*****, 然后回车, 登录之后, 如下图所示

0, 0 0 Rows, 0 Cols

CAP NUM

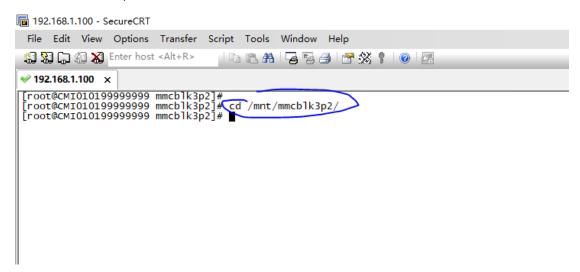

Open in a tab

Connect Close

三、修改文件内容

- 1. 由于同一网络段可能存在多台设备,所以可能需要每一台设备 IP 地址和设备名称
- 2. 输入命令如下,进入目录 mmcblk3p2 cd /mnt/mmcblk3p2/

3. 输入命令如下,编辑文件 autoStartRcs.sh vi autoStartRcs.sh

 将鼠标的光标移到行/sbin/ifconfig eth0 192.168.1.100, 然后按键盘上的小写字母 a 键, 就可以对文件内容进行编辑

```
#bin/sh
#This sh script is a hook for system start
export PATH-$PATH:\mmr\mmcblk3p2/usr/bin:\mmt/mmcblk3p2/usr/ubin:\mmt/mmcblk3p2/usr/usbin

ln -s \mmt/mmcblk3p2/usr/touchconfig/pointercal /etc/pointercal

# usb hotplug
/usr/sbin/ifconfig eth0 192.168.1.100
/sbin/ifconfig eth0 192.168.1.100
/sbin/ifconfig eth0 192.168.1.100
/sbin/ifconfig eth0 memask_255.255.255.0

#wifi used for station
#ln -s /mrt/mmcblk1p2/usr/wpaconfig/wpa_supplicant.conf /etc/wpa_supplicant/wpa_supplicant.conf
#wpa_supplicant -d -Dwext -iwland -B -c /etc/wpa_supplicant/wpa_supplicant.conf
#ficonfig and 0 192.168.2.252
#route add default by 192.168.2.253

#can configuration
ifconfig cand odown
canconfig cand odown
canconfig cand otrlmode loopback off
export TSLIB_TSEVENTTYPE='INPUT'
export TSLIB_CALIBFILE='/etc/pointercal'
export TSLIB_CALIBFILE='/etc/pointercal'
export TSLIB_CONSCIEDVICE='none'
export TSLIB_CONSCIEDVICE='none'
export TSLIB_CONSCIEDVICE='none'
export TSLIB_CONSCIEDVICE='/dev/finput/event0'

#qt configuration
export LD_LIBRARY_PATH=/usr/lib/qt_lib/fonts'
export QWS_DISP_LAV='linuxfb:mmwidth50:mmHeight130:0'
export QWS_SIZE=1024x768

#export QWS_MOUSE_PROTO=tslib:/dev/input/event0'
export QWS_MOUSE_PROTO=tslib:/dev/input/event0'
export QWS_MOUSE_PROTO=tslib:/dev/input/event0'
export QWS_MOUSE_PROTO=tslib:/dev/input/event0
export LD_LIBRARY_PATH=/usr/lib/opencv_lib/usr/lib/opencv_lib/3rdparty:$LD_LIBRARY_PATH
cd_/mnt/mmcblk1p2/userapp/codesyscott/
./codesyscontrol &
```

- 5. 修改这行的内容,将其修改为用户自己想要的 IP 地址
- 6. 将光标移到文件的最下端,修改设备的名称,例如输入如下内容 hostname Wuxin_Screen_01
- 7. 然后按键盘最左上角的 Esc 键, 然后同时按 shift 键和:键, 会在左下角出现":"号

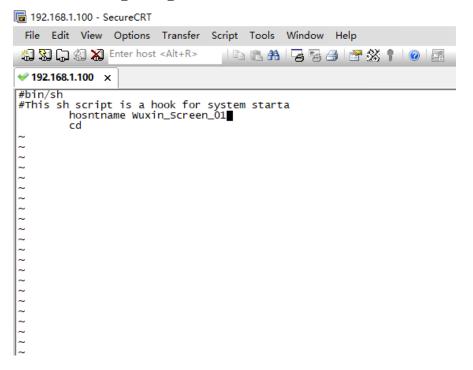

```
√ 192.168.1.100 ×

#bin/sh
#This sh script is a hook for system start
export PATH=$PATH:/mnt/mmcblk3p2/usr/bin:/mnt/mmcblk3p2/usr/usb
                    ln -s /mnt/mmcblk3p2/usr/touchconfig/pointercal /etc/pointercal
                   # usb hotplug
/usr/sbin/netlink &
                    /sbin/ifconfig eth0 192.168.1.100
/sbin/ifconfig eth0 netmask 255.255.255.0
                   #wifi used for station
#ln -s /mnt/mmcblk1p2/usr/wpaconfig/wpa_supplicant.conf /etc/wpa_supplicant/wpa_supplic
#wpa_supplicant -d -Dwext -iwlan0 -B -c /etc/wpa_supplicant/wpa_supplicant.conf
#ifconfig wlan0 192.168.2.252 up
#route add default gw 192.168.2.253
                   #can configuration
ifconfig can0 down
canconfig can0 bitrate 250000
canconfig can0 ctrlmode loopback off
canconfig can0 start
                   #ts configuration
export TSLIB_TSEVENTTYPE='INPUT'
export TSLIB_CALIBFILE='/etc/pointercal'
export TSLIB_CONFFILE='/etc/ts.conf'
export TSLIB_CONSOLEDEVICE='none'
export TSLIB_FBDEVICE='/dev/fb0'
export TSLIB_PLUGINDIR='/usr/lib/qt_lib/ts'
export TSLIB_TSDEVICE='/dev/input/event0'
                   #qt configuration
export LD_LIBRARY_PATH=/usr/lib/qt_lib:$LD_LIBRARY_PATH
export QT_QWS_FONTDIR='/usr/lib/qt_lib/fonts'
export QT_PLUGIN_PATH='/usr/lib/qt_lib/plugins/'
export QWS_DISPLAY='linuxfb:mmWidth50:mmHeight130:0'
export QWS_SIZE=1024x768
                    #export QWS_MOUSE_PROTO=tslib:/dev/input/event0 mouseman:/dev/input/mice'
export QWS_MOUSE_PROTO='tslib:/dev/input/event0'
export LD_LIBRARY_PATH=/usr/lib/opencv_lib:/usr/lib/opencv_lib/3rdparty:$LD_LIBRARY_PAT
                   cd /mnt/mmcblk3p2/userapp/codesysctl/
./codesyscontrol &
                   hosntname Wuxin_Screen_01
. . . . . . . . . .
```

- 8. 如果输入 wq, 再回车键, 保存修改的内容, 如果输入 q! ,则表示不保存原来的内容, 强制退出
- 9. 输入命令如下,查看文件是否修改成功 cat autoStartRcs.sh

```
[root@CMI010199999999 mmcb]k3p2]#
[root@CMI010199999999 mmcblk3p2]# ls
autostartProfile.sh autostartRcs.sh
[root@CMI010199999999 mmcblk3p2]# cat autoStartRcs.sh
#bin/sh
#This sh script is a hook for syst<del>em start</del>
export PATH=$PATH:/mnt/mmcblk3p2/usr/bin:/mnt/mmcblk3p2/usr/ubin:/mnt/mmcblk3p2/usr/usb
                  ln -s /mnt/mmcblk3p2/usr/touchconfig/pointercal /etc/pointercal
                  # usb hotplug
/usr/sbin/netlink &
                  /sbin/ifconfig eth0 192.168.1.100
/sbin/ifconfig eth0 netmask 255.255.255.0
                  #wifi used for station
#ln -s /mnt/mmcblk1p2/usr/wpaconfig/wpa_supplicant.conf /etc/wpa_supplicant/wpa_supplic
#wpa_supplicant -d -Dwext -iwlan0 -B -c /etc/wpa_supplicant/wpa_supplicant.conf
#ifconfig wlan0 192.168.2.252 up
#route add default gw 192.168.2.253
                  #can configuration
ifconfig can0 down
canconfig can0 bitrate 250000
canconfig can0 ctrlmode loopback off
canconfig can0 start
                   #ts configuration
                  #ts configuration
export TSLIB_TSEVENTTYPE='INPUT'
export TSLIB_CALIBFILE='/etc/pointercal'
export TSLIB_CONFFILE='/etc/ts.conf'
export TSLIB_CONSOLEDEVICE='none'
export TSLIB_FBDEVICE='/dev/fb0'
export TSLIB_PLUGINDIR='/usr/lib/qt_lib/ts'
export TSLIB_TSDEVICE='/dev/input/event0'
                  #qt configuration
                  #qt configuration
export LD_LIBRARY_PATH=/usr/lib/qt_lib:$LD_LIBRARY_PATH
export QT_QWS_FONTDIR='/usr/lib/qt_lib/fonts'
export QT_PLUGIN_PATH='/usr/lib/qt_lib/plugins/'
export QWS_DISPLAY='linuxfb:mmWidth50:mmHeight130:0'
export QWS_SIZE=1024x768
                  #export QWS_MOUSE_PROTO=tslib:/dev/input/event0 mouseman:/dev/input/mice'
export QWS_MOUSE_PROTO='tslib:/dev/input/event0'
export LD_LIBRARY_PATH=/usr/lib/opencv_lib:/usr/lib/opencv_lib/3rdparty:$LD_LIBRARY_PAT
                  cd /mnt/mmcblk3p2/userapp/codesysctl/
                  ./codesyscontrol
hosntname Wuxin_Screen_01
[root@CMI010199999999 mmcblk3p2]# ■
```

10. 按照同样的方法在文件 vi autoStartProfile.sh, 在文件的最下面增加登录是的用户名 hosntname Wuxin Screen 01

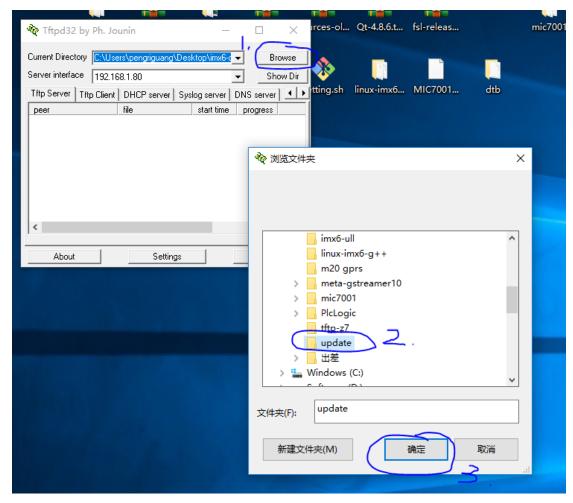

四、 升级设备文件内容

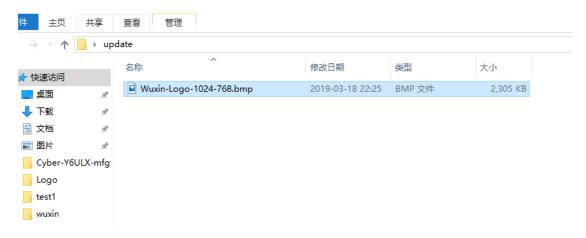

1. 在 PC 的桌面新建文件夹, 例如 update, 如下图所示:

2. 双击 TFTP 服务器软件,浏览当前目录到刚才新建的目录 update,如下图所示:

3. 将需要升级的文件拷贝到 update 这个目录, 例如 Logo 文件 Wuxin-Logo-1024-768.bmp

4. 在 SecureCRT 中,输入如下内容,将升级文件分区挂载到指定目录,并且进入挂载的目录,以及查看该目录下的内容

mount /dev/mmcblk3p1 /mnt/mmcblk3p1/cd /mnt/mmcblk3p1/

5. 备份原来的文件

mv logo.bmp logo.bmp.bak

6. 通过 TFTP 命令从 PC 的 TFTP 服务器所指定的目录中下载升级文件,例如 Wuxin-Logo-1024-768.bmp,命令指定的 IP 地址为 PC 的 IP 地址,输入命令如下:

###p. or Wuxin Logo 1024-768.bmp 192168 1 200

tftp -gr Wuxin-Logo-1024-768.bmp 192.168.1.200 ls

7. 修改下载文件名称

mv Wuxin-Logo-1024-768.bmp logo.bmp

8. 退出挂载目录,并且卸载挂载的目录,输入命令:

cd

umount /mnt/mmcblk3p1/

9. 输入命令 reboot, 重启系统

用户需要注意的是,需要确保升级的文件已经正确下载到对应的目录下,才能重启系统, 否则可能会出现,系统重启之后,不能正常启动的情况。
